

## Health Screening

Age: 15-30

Our practice follows evidence based medicine in that prevention and screening for specific health concerns can pick up disease early and reduce disease impact.

For this reason, we invite you to help us ensure your health risks are monitored as recognised by currently guidelines.

To do this we invite you to complete the following table. Following your input reminders will be set in our system as in the column frequency recommended to ensure your health is monitored.

If you do not fill in the table, these issues will be brought up opportunistically with your Doctor.

Please complete table by ticking if you are happy to participate and putting the date of the last check you can recall being done.

	Happy to participate	Last check	Freq recommended	Doctor freq recommended instead	Admin only Inputted
<b>Weight</b>			Two yearly		
<b>Smoking</b>			Opportunistically
